Bulletin Notes for 14th January 2020

Vocational Meeting, BrewiColo Brewing Company, 1/32 Marine Parade, Ocean Grove.

68 Rotarians, Partners and Guests attended. Hamburgers were provided from the family van followed by ice-creams.

A tour of the facility and explanation of the brewing process was provided by our host. Water is boiled in a two and half thousand litre kettle at 85 degrees for an hour and half to be used through the brewing process. Cracked hops are first processed in the mash tub, mixed with water at 64 degrees and then stepped up to 72 degrees for an hour and half to break down the starches. It is tested with iodine until a brown colour is achieved. This is known as the wort. The wort is clarified by circulating the mixture until clear and then put into a boil kettle which contains 1,300 litre of wort and boiled to 96 degrees.

Beer consists of four elements, hops, yeast, water and malt. Different combinations produce different types of beer. The wort is boiled for a maximum of 60 minutes and then the heat is dropped. A whirlpool is created to draw off proteins. The mixture is then sent through a heat exchange using cold water into the fermentation tanks - one two thousand litres and two of two and half thousand litres. Yeast is added at this stage and left for 10 to 14 days to develop. The clear beer then goes into conditioning tanks for a further 5 to 10 days. CO2 is pumped into the tanks. The beer is then canned, put into kegs or bottled. BrewiColo beer is sold in Ocean Grove, Barwon Heads and in Geelong. The waste product is collected and used to feed calves.

### Notes from Rod Bush:

#### Movie: Jan 21

Movie is "Sorry We Missed You". 4.5 stars. Intimate and Powerful Drama. A family who have been struggling since the 2008 financial crash, Rikki appears with a new delivery van, a chance to run his own business. It's hard work but with the family unit strong and being pulled in different directions everything comes to breaking point.
